- Understand real-time business trends by maintaining a live connection to virtually any data source during analysis.

Application Support

Efficiency is Our Strength

US Software offers a range of product support services to enable independent software vendors to focus on customer satisfaction while reducing the cost of support and making it more widely available. Support can become a competitive strength for an ISV by outsourcing it to a partner like US Software

An Extention To Your Team

Our support specialists will work as an extension of a product company's support department during their regular and off hours to provide extended and/or continuous 24/7 support. US Software qualified professionals will ensure our client's Service Level Agreements (SLA) for support are met through periodic monitoring and progress reviews.

Application Support

Our Services Include

- Toll-free telephonic support
- Early support and maintenance planning
- System integration and migration
- Remote and on-site support
- Reactive and proactive support
- Response-time driven support
- Troubleshooting & continuing maintenance support

Application Support

Ultimate Successful Support

- Talented and experienced engineers who are professional, easy to work with and strong communicators.
- Utilize a comprehensive set of tools covering all stages of application support and maintenance, configured and integrated with our clients' tools.
- Follow reliable processes, policies and procedures so that resources can be added smoothly, requests, incidents, and tasks can all be performed and tracked closely, and key metrics/SLAs can be continuously monitored and refined.
